In a similar way, new patients qualify for a gap only professional check-up, full mouth x-ray, a clean and advice.

CEREC 3D

PORCELAIN CROWNS, INLAYS AND VENEERS - IN ONE SINGLE SESSION

Whilst providing general dental care in our office we specialise in advanced dental treatment options one of which is the CEREC AC computerized machine.

Here is how it works:

If an old failing (metal-)filling needs replacement, all traces of the old filling and potential decay is removed. A digital impression will be taken with the CEREC AC 3D camera. The model of your tooth appears on screen and whilst you watch, your new restoration will be firstly designed and then milled out of a solid porcelain block. The finished restoration is then bonded to your tooth.

The convenience of having porcelain restorations completed in one single sitting is significant, since impressions, temporaries and laboratory waiting times become obsolete.

DENTAL IMPLANTS

Dr Alex Dietz has trained extensively and the team at Junction Dental is proud to make this treatment available to our patients

Unlike removable dentures or bridges to replace a missing tooth, a dental implant will not require work on neighbouring teeth. Implants are stand alone restorations, giving you back great chewing comfort a beautiful smile and therefore, quality of life.

HEALTHY TEETH AND A BEAUTIFUL SMILE

Boost your dental health by following a few simple procedures some of which are listed below.

Useful Tips & Hints

- Brushing twice daily using a soft tooth-brush and a mouthwash (every second day) - try 'Savacol' - for best results
- Tip: dip your brush in 'Savacol', add a bit of T-paste and brush with that, circular motions, gums too
- Flossing is the single most important accessory to brushing, even 2 / 3 times a week, is beneficial
- Reducing soft drinks consumption, avoid sugar and acid supply, water is best
- Chewing sugarless gum increases salivary flow, reduces acidity in the mouth and has a cleansing effect
- Support above routines, with a professional clean & polish twice yearly. Regular removal of plaque and tartar will give you shiny teeth and healthy gums.
- At JD we include dietary advice during your check-up and provide you with a personalized oral hygiene routine designed especially for you.

Some of the services provided at JUNCTION DENTAL

- 'Airflow' polishing
- Preventive Care
- Digital X-rays
- Porcelain Veneers
- Dental Implants
- Metal Filling Replacement
- Teeth Whitening
- Dietary/Lifestyle Advice

ASK THE DENTIST

Q: Which tooth brush/paste should I use?

A: What feels most comfortable is the way to go. Try gentle circular motions, over the gums too.

Q: Should I use an electrical tooth brush?

A: Yes. It would be hard to replicate by hand all the moves that clever little brush is performing.

Q: Should I use a mouthwash?

A: Yes. It helps by removing nasty bugs from your mouth, thus helping oral hygiene. Try 'Savacol'.

Q: Should I consider having my teeth whitened?

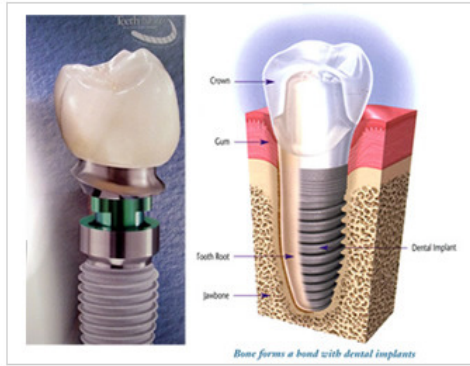

A: Depends on degree of discoloration and if your teeth are sensitive.

Q: Can I use chewing gum?

A: Sugarless gum has a cleansing effect as well as reducing acidity, especially after a meal.

Q: Can I have my teeth straightened, at my age?

A: There is no set age limit to have the treatment.

Here is how it works:

A dental implant is a small titanium screw replacing the root of the missing tooth. Fixed, implant-borne teeth not only look like your own teeth, they feel like them too.

A dental implant replaces the lost tooth root and acts as a 'post' for the implant crown. And it does not hurt a bit.

Dental Implants make a very attractive alternative to dentures and bridges. Please check our web-site for further information about dental implants.
